

Capstone Project Requirements

- ✓ Be a **new repo**
- ✓ Have separate directories for the frontend (client) and backend within the main repository
- ✓ Include a *beautiful*, professional **README.md** (use markdown)
- ✓ Your README should have links to socials, a detailed description of your project, technologies used, a getting started section (with links to your deployed site and Trello), screenshots of your final product (no more than 2-3), future updates, and credits.
- ✓ Include a minimum of 3 models (Postgres, Sequelize, or Mongoose)
- ✓ Have full CRUD operations (POST, GET, PUT, DELETE) on at least one model
- ✓ Use functional components with React hooks.
- ✓ Have at least **60 meaningful git commits** - You should be committing your changes every time you build a new feature.
- ✓ Your code should be properly indented, spaced, and within code blocks. **DO NOT** leave in commented out code that was left unused (bad practice).
- ✓ Be deployed
